

Materials and solutions
for the defense industry

Advanced plastics, chemicals
and lubricants for demanding
military applications

High-performance materials and solutions for the modern defense industry

Telko is a leading distributor and solution provider for plastics, chemicals, and lubricants. Since 1908, we have supported a wide range of industries - from industrial manufacturing and infrastructure to mobility, energy, and safety-critical applications. We do this by delivering reliable materials expertise and building long-term partnerships based on trust and performance.

Today, we support companies and organizations with the materials and technical know-how needed to design, manufacture, and operate high-quality products under demanding and regulated conditions.

Telko operates in 18 countries and is part of Aspo Plc, a listed company headquartered in Finland. In 2025, Telko had net sales of EUR 284.5 million and employed approximately 368 professionals dedicated to ensuring continuity, quality, and security of supply for our customers.

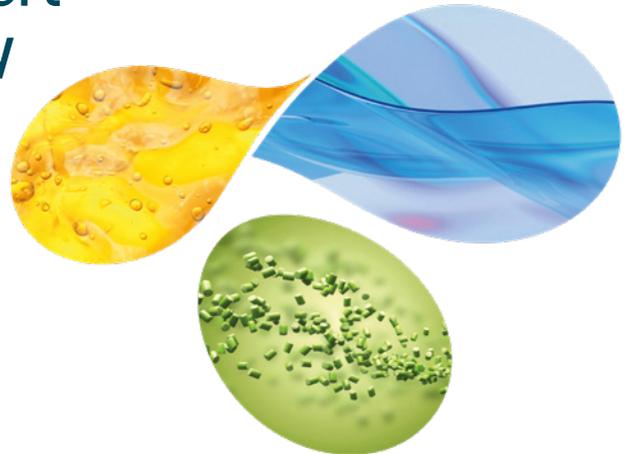

Telko excels as a strategic partner for defense and security sectors on

the strength of its three core segments: plastics, chemicals and lubricants.

With global sourcing capabilities and local presence, we provide tailored support for defense applications. Our approach combines advanced material science with deep industry knowledge to help manufacturers and operators optimize performance, reduce environmental impact and improve cost efficiency.

Embodying sustainability, operational excellence and technical expertise, **The Telko Effect™** ensures that every solution meets stringent industry standards.

Spec-ready products, expert support and reliable supply

Broad portfolio with leading suppliers

Our representation of world-class manufacturers of plastics, chemicals and lubricants ensures traceability, continuity and consistent quality – and options to switch to equivalent grades if availability changes.

Certifications and policies

Telko's ISO 9001 and ISO 14001 certifications, group HSES policy and EcoVadis Gold rating form a documented foundation for quality audits, ESG assessments and supplier qualification packages.

Requirements assurance

When programs specify OEM or NATO/MIL requirements, we can help validate the right products and compile the documentation needed to demonstrate compliance.

Technical and documentation support

We help translate application needs into workable material and formulation choices and assemble audit-ready compliance packs. Program information is handled under strict confidentiality.

Dependable and flexible logistics

With a multi-country network and around 50 warehouses, we move materials fast and ship in the formats of your choice – from small packs to drums, IBCs and bulk. We are also able to offer safety stock arrangements.

Extensive operational reach

Local support and supply continuity are secured by our offices, warehouses and personnel across the Nordics, Baltics, Poland, Germany, Benelux and beyond.

Advanced engineering plastics for mission-critical components

Telko offers a comprehensive portfolio of engineering polymers essential for defense applications that require durability, strength, lightweight properties and thermal stability. With our combination of advanced polymers and technical expertise, we can help manufacturers of defense systems reduce overall weight and improve maneuverability while maintaining structural integrity under extreme conditions.

Our portfolio features materials from major suppliers such as DuPont, Eurotec, ExxonMobil, Hexpol, Kolon, LG Chem, Lotte and TotalEnergies. We can also provide

sustainable options – including recycled and biodegradable polymers – to help defense organizations meet environmental goals without compromising performance.

Defense applications

Drone, UAV and aerospace military vehicle components

Armored and land vehicle components

Protective gear

Enclosures and housing for electronics, weapons, ammunition and explosives

Rigid packaging solutions (PE/PP)

Grips, handles and soft-touch components

Materials

Durable, lightweight and thermally stable engineering polymers (e.g. PA, POM, PBT, PC, PC/ABS, PPS, PEEK, TPE, TPU, PLA) and tailored masterbatches for high performance, strength, weight reduction and fire and electrical safety

Specialty chemicals for protection, readiness and longevity

Telko supplies specialty solutions, such as coatings, adhesives and maintenance chemicals, and environmental safety products suitable for defense applications. Selected to meet relevant standards, the chemicals ensure safety, reliability and environmental compliance.

Our sourcing and application expertise helps optimize performance and service life, so military platforms withstand harsh conditions and stay operational across air, land and sea with minimal

maintenance downtime. Supply continuity and consistency are ensured by interchangeable sources from leading producers such as ExxonMobil, LyondellBasell, BRB, Momentive and Nouryon.

Defense applications	Materials
Bases and structures	Specialty coatings for corrosion protection
Maintenance operations	Cleaners to support operational readiness and service life of equipment
Environmental safety support	Absorbents and products for oil spill response, firefighting foams, lithium ion battery charging cabinets
Electronics and sensors	Cleaning agents, coating and corrosion protection materials
Explosives and propellants	Process chemicals, oxidizers and stabilizers for the manufacture and formulation of energetic materials
Vessels, production facilities, data centers	Heat transfer liquids for applications like facility maintenance

Lubricants and metalworking fluids for demanding defense equipment and operations

Telko provides metalworking fluids, cleaners and corrosion protection for demanding machining and component manufacturing. For air, land and sea operations, we offer high-performance lubricants, automotive oils and chemicals. Designed for challenging environments, prolonged service intervals and extended equipment lifetime, they enable reliable and efficient operations.

We have long experience in supplying established products for a broad range of applications. Where required, our lubricants team provides technical

support and services – including assistance with product selection and documentation aligned with OEM and NATO/MIL requirements.

Defense applications

Manufacturing and machining (including special alloys and precision components)

Mobile equipment and support vehicles for ground forces

Aviation and air operations

Naval and marine operations

Materials

Metalworking fluids, cleaners and corrosion protection. High-performance lubricants – gear oils, hydraulic oils, greases and speciality products.
